BASIC-ABSTRACT:

NOVELTY - A test kit for visualizing fine lines and wrinkles on a person's skin, comprises a transparent strip (2) having an adhesive on one surface, an imaging substrate with darkened area(s) for receiving the transparent strip, and written instructions within the kit. The adhesive has sufficient tack to maintain an imprint of fine lines and wrinkles after removal of the strip from the skin.

DETAILED DESCRIPTION - A test kit for visualizing fine lines and wrinkles on a person's skin, comprises a transparent strip having an adhesive on one surface, an imaging substrate with darkened area(s) for receiving the transparent strip, and written instructions within the kit. The adhesive has sufficient tack to maintain an imprint of fine lines and wrinkles after removal of the strip from the skin. The instructions direct a consumer to place the adhesive surface of the strip against a skin area requiring measurement, to remove the strip and place same against the darkened area of the substrate, to repeat the procedure at a future time followed by comparison of patterns resultant from the first and second strip applications to the skin.

An INDEPENDENT CLAIM is included for a method for evaluating efficacy of an anti-aging cosmetic product which involves providing a kit, applying the cosmetic product to the skin, placing the adhesive surface of the strip against the skin treated with the cosmetic product, removing the strip and placing same
